

BRM Unit 9 PYQ Questions

Unit 9: Quantitative Data Analysis I, Measurement, Reliability, Validity, Rating Scales, Measurement Error, and Basic Statistical Technique Selection.

1. Final Exam: 06 May 2026

Q5

Explain any two methods used to evaluate the consistency of a measurement instrument in research. What is validity of a research tool? Illustrate with a suitable example.

Q6

Define measurement error in the context of questionnaire design.

A company is conducting a survey to measure customer trust and loyalty toward its brand. During pilot testing, the research team realizes that several questions may introduce bias, ambiguity, and measurement errors.

Critically evaluate any three types of measurement errors arising from poorly designed questionnaire items. For each type:

1. Identify the issue.
2. Provide an example.
3. Redesign the question to improve measurement accuracy.

Q7

A bank wants to evaluate whether customer satisfaction levels differ across three types of service channels:

1. Branch banking
2. Mobile banking
3. Internet banking

The management suspects that satisfaction may vary depending on the channel used and wants to take strategic decisions to improve customer experience.

1. Identify the most appropriate statistical technique for this study and justify your answer.
2. Formulate the null and alternative hypotheses.
3. Explain how this technique will help the management in decision-making.
4. If the results are significant, what managerial action can be taken next?

2. Re-Exam: 05 July 2024

Q4(b)

Discuss the importance of reliability and validity in research.

Q6

You are a data analyst working for a large retail chain with multiple stores across different locations. The company is looking to enhance its sales performance and wants to understand the factors that influence sales.

Enumerate the variables that could possibly be taken to conduct the research by classifying them into dependent and independent. Also, mention and justify the choice of the technique to be used for such work.

3. Final Exam: 23 April 2024

Q4(a)

Discuss briefly the different rating scales, any five, used in business research with suitable examples.

Q4(b)

Describe the means by which the reliability and validity of measures can be assessed.

4. Re-Exam: 30 June 2023

Q6(a)

Write down the importance of reliability and validity in research. Explain why it is important to establish the goodness of measures.

5. Final Exam: 26 April 2023

Q1(a)

Discuss briefly the structure of a research report.

Q6(a)

Write down the importance of reliability and validity in research.

6. Re-Exam: 13 June 2022

Q4(a)

Discuss the factors affecting reliability in a research process. Why is it important to establish goodness of measure and how is it done?

Q6

Discuss in detail the guidelines to be followed to formulate a research report, with a suitable example.

7. Final Exam: 11 April 2022

Q4(b)

Explain the statement: "A valid instrument is always reliable, but a reliable instrument may not always be valid."

8. Sample Paper 3

Q2

In the context of modern data-driven decision-making, explain the importance of operational definitions when measuring abstract concepts like "Employee Engagement" or "Organizational Climate." Provide a brief example of how you would operationalize the concept of "Consumer Trust" into measurable elements.

Frequency By Question Type

Rank	Question type	Count	What to prepare
1	Reliability and validity / goodness of measures	5	Definitions, importance, assessment methods, e
2	Measurement error / questionnaire measurement issues	1 major case	Types of errors, biased/ambiguous
3	Rating scales	1	Likert, semantic differential, numerical, ranking, dichotomous
4	Statistical technique selection	2	Variables, dependent/independent classification, ANOVA/regress
5	Operational definitions	1 sample	Convert abstract concepts into measurable items
6	Research report structure/guidelines	2 older questions	Read once if time permits

Must-Do Unit 9 Topics

1. Reliability
2. Validity
3. Goodness of measures
4. Rating scales
5. Measurement error
6. Operational definitions
7. Basic statistical technique selection

Lower Priority Unit 9 Topics

1. Research report structure
2. Research report guidelines

These appeared in older papers and can be revised once after the main topics.
